

Adam has two degrees, a BS in Material's Science and a MS in Environmental Engineering. His passion for the environment, energy, and people ultimately led him to become a Sustainability Engineer at Schlumberger. Working on the Schlumberger Global Stewardship Team, Adam works alongside facilities' managers, globally, to strategize how each facility can lower its environmental footprint.

Additionally, Adam's interest and education in water and water treatment aligned him with the Water Lifecycle and Strategy Technical Section where he serves as the Membership Chair.
