

MARK YOUR CALENDARS!!

Society of Petroleum Engineers
Wyoming Petroleum Section

CONTINUING EDUCATION PRESENTATION

Ron Auflick

Retired-Wold Energy Partners

Wednesday, May 20, 2020

True River Cross Commons

8:00 AM to 12:00 PM

Cost TBD

More Information Coming!!

Recently Shell Drilled a “Horseshoe” Well in the Permian Basin. Other operators are now implementing enhanced recovery on unconventional wells. A Wyoming operator is proposing 2560 acre DSU. An English company is designing “caterpillar” unconventional wells that are to be drilled and completed without fracking. What do all of these have in common? Where is the future taking us? At the request of the Society of Petroleum Engineers (SPE), Mr. Auflick created and presented a professional seminar focused on “How To” Develop Unconventional Resources. Track record for on time, safe wells delivered at or under AFE. Ron Auflick will present a look at the evolution of shale wells, their lengthening, their enhancements and what the next generation of unconventional wells will look like.

Ron Auflick is a Casper based engineer that has over 41 years of diverse domestic and international experience. Exposure to all aspects of drilling and completions with professional focus on HTHP, ERD and Unconventional Horizontal opportunities. Some of you may have attended previous SPE short course he taught (2010 and 2015). Focusing on directional, horizontal and extended reach drilling, Ron has been directly involved in hundreds of unconventional wells in 10 states and some 31 countries including the current world record ERD wells. Ron has authored papers or given presentations for PAW, WGA, SPE, AADE, Wyoming Oil & Gas Fair, American OIL & Gas Reporter, Oilfield Review, and for American Society of Mechanical Engineers.
